DNSDumpster.com is a FREE domain research tool that can discover hosts related to a domain. Finding visible hosts from the attackers perspective is an important part of the security assessment process.

Open Source Intelligence for Networks

Attack

The ability to quickly identify the attack surface is essential. Whether you are penetration testing or chasing bug bounties.

Defend

Network defenders benefit from passive reconnaissance in a number of ways. From threat analysis to cyber security strategy.

Learn

Understanding network based OSINT helps information technologists to better operate, assess and manage the network.

We have been featured in well known cyber security conferences and resources.

bugcrowd

MITRE
ATT&CK™

Map an organizations attack surface with a virtual dumpster dive* of the DNS records associated with the target organization.

**DUMPSTER DIVING: The practice of sifting refuse from an office or technical installation to extract confidential data, especially security-compromising information.*

this is a <https://hackertarget.com> project

At hackertarget.com, we have been scanning the Internet since 2007. With hosted vulnerability scanners reaching millions of IP addresses every year.

Our aim is to make open source security solutions visible and viable for any sized organization.
